DROP FORGING BOOK

UNITED STATES NAVY

PREFACE.

1. PURPOSE.

The quantity of Drop Forging Books which was prepared and issued as the edition of 1917 has been exhausted, and in view of the number of drop forging dies which have been authorized since this edition was prepared, it has been deemed desirable to issue the edition of 1919 at this time, rather than to order the printing of additional copies of the edition of 1917.

In the preparation of this and the previous edition of the Drop Forging Book, it has been the purpose of the Bureau of Construction and Repair to provide a book containing sketch plans of all drop forgings made from dies at the various navy yards in a form similar to a handbook in order that it might be kept always near at hand for ready reference. It is not intended to give elaborate detail plans of the forgings, and the sketches in this book are not provided for use as such, but are for the purpose of indicating the general design of the forging and the dimensions which have influence on the usefulness of the forging for general purposes.

This edition contains the information and plans which were included in both the issue of 1917 and Addendum No. 1, issued 1918.

2. COMPILATION OF DROP-FORGING BOOK.

This book has been compiled from the die books of the New York, Norfolk, Mare Island, Boston, and Portsmouth (N. H.), navy yards, and in its present form represents a consolidated drop-forging die book, containing drawings of the forgings made from each authorized die at these yards. In each case where there is a die at more than one yard, for manufacturing forgings of identical or very nearly identical design, a single sheet has been made for the forging, and a single die number

436957

assigned, designation being made by means of letters attached to the die number, to indicate the yards at which the dies are located.

In connection with this consolidation of die books, new numbers in a series commencing with 1000 have been assigned and it is by these numbers that the dies are to be designated after the issue of this book. In the assignment of these numbers no special effort has been made to arrange the sheets alphabetically as well as numerically, but it is believed that the index to this book will provide the necessary means for readily locating any drop forging. An index of the former die numbers at the several yards with their corresponding new numbers has also been provided to further facilitate the location of the plans of the drop forgings.

In order that the sheet for each drop forging may conveniently indicate the yards at which a die for manufacturing the forging is located, a letter indicating each of these yards has been added as a part of the die number, indicated in the lower right-hand corner of each sheet. The designating letters which have been used are as follows:

P—Portsmouth.
B—Boston.
Y—New York.
N—Norfolk.
M—Mare Island.
S—Puget Sound.

It is not intended that the letters should be given each time it is desired to refer to a die by its number, the number itself being sufficient identification for any die or drop forging. The only purpose of the letters is to indicate the yards at which the dies are located.

3. ASSIGNMENT OF NUMBERS TO NEW DIES.

The assignment of numbers for all new dies which are manufactured at the navy yards is made by the Bureau, either at the time authority to manufacture the die is requested, or in

the case of dies authorized by other bureaus or by the yard authorities, at the time a request for the assignment of the number is received. It is the Bureau's aim to act promptly on requests for assignment of die numbers, in order that the manufacture of the dies at the yards will not be delayed.

In each case where the manufacture of a die has been authorized since June 5, 1915, the date on which the Bureau's circular letter relative to the renumbering of drop forgings was issued, numbers above 3000 have been assigned, and these numbers have been entered upon the respective drawings.

4. MANUFACTURE OF DIES AND PREPARATION OF DRAWINGS.

When a letter is forwarded to the Bureau requesting authority to manufacture a die, it should be accompanied by a plan showing the fitting which it is desired to make. In the case of forgings which are manufactured under authority granted by other Bureaus or by local authority, a plan should be forwarded at the time the request is made for the assignment of a die number. In general, it is considered that the plan should be complete and in the form specified by the Bureau, but in some cases where the need for the die is urgent, or where there are unusual difficulties in the preparation of the plan on account of lack of knowledge as to how the die will be made, it will be satisfactory to the Bureau if a sketch showing the outline and dimensions of the fitting is submitted, or if reference is made to the item number of a standard or Bureau plan on which the fitting appears.

In cases where the completed drawing for the Drop Forging Book is not forwarded prior to the assignment of the die number, the preparation of this plan should be expedited when the required information is available, and the plan forwarded for the Bureau's files.

The following principles should guide the preparation of drawings for this book:

(*a*) The forgings should be shown in the condition in which they are of the greatest general interest. In the case of forg-

ings which have but one definite use, it is considered that the drawings should indicate the condition in which they are used, the necessary machining, drilling, or finishing being clearly indicated by brief notes. In the case of forgings for which there are several known or practical uses, it is believed that no finishing should be shown, except that which may be necessary before the forgings can serve any purpose. Location and size of holes and removal of draft, which may vary according to the use of the forging, should not be indicated unless accomplished in part or in whole during the forging processes.

(*b*) All draft which is allowed to remain on the forgings should be clearly indicated, it being understood that draft which is not shown is removed during the manufacture of the forging.

(*c*) Drawings should be made on standard size sheets with an inner border measuring 10½ by 7½ inches, the outside dimensions of the sheet being 12¾ by 7¾ inches. The title should be arranged in one or two lines to suit the case, the letters in the first line being three-sixteenths inch high, and those in the second line one-eighth inch high. The top of the letters in the first line should be 2½ inches from the bottom border line of the sheet. The scale should be indicated as "full size," "half size," etc.

(*d*) When information is available relative to the weight of the forgings shown on the various plans, it should be forwarded to the Bureau to be incorporated on these plans.

It has been suggested to the Bureau that the plans for the Drop Forging Book include the split line and other information which will permit its use as a working drawing by the die sinker. While this might be desirable for this particular purpose the general use to which the plans in the Drop Forging Book are put does not appear to warrant including this additional information, which tends to make the drawings more complicated. It might be desirable for the yards to maintain a set of prints of the die sheets suitably marked to indicate the method of manufacture of the die and forging. This infor-

mation would then be available for both the navy yard and the Bureau, should occasion arise when such information could be used.

5. NOMENCLATURE OF FORGINGS.

In the preparation of the die sheets for the existing dies, it has been the Bureau's aim to adopt a uniform nomenclature for drop forgings, and one which, as nearly as practicable, is in accordance with the usual commercial designations for similar fittings. The names applied to the fittings by the various navy yards and those given on the Bureau's standard plans have in each case been considered and the name which seems best to indicate the nature of the fitting has been chosen as a title for the die sheet for that forging. It is desired that when die sheets for new dies are prepared in the future the titles be as nearly consistent as practicable with the titles of the sheets in this book for similar forgings.

In the revision of the edition of 1917, it has been found desirable to change the titles of some of the plans in order that they may conform to standard plans which have been issued since this edition was published.

Wherever practicable, a dimension has been chosen by which the size of the forging may be designated, and in such cases this dimension forms a part of the title for the sheet. For instance, all forgings that are classed as eyebolts are designated by the diameter of the shank of the bolt, pad eyes by the size of the wire forming the eye, etc. In each case where the "designating" dimension is shown on the plan of the forging, it has been placed within a small circle, in order that it may be seen at a glance.

6. ORDERING FORGINGS.

In order that some of the confusion may be eliminated which has resulted in the past from the uncertainty as to the condition in which forgings would be received, it is suggested that in the future there be incorporated in all orders for drop forgings the following statement:

(*a*) The name and die number of the forging.

This name should correspond exactly with the title of the die sheet in this book, and the number should correspond to the die number given in the lower right-hand corner of each page. It is, however, not necessary to include the designating letters which form a part of the die numbers as given on the die sheets.

It has been noted from various papers and records which are received in the bureau that in some cases reference is still being made to the old die numbers which were in effect before the Drop Forging Book was issued. In order that confusion in this connection may be avoided, it is requested that all references to dies be made by the die numbers which appear in this book, and it is desirable to avoid the use of the old die books in the various yards. An effort has been made to include the useful information contained in the former die books in the Drop Forging Book, and it would not appear necessary, therefore, to retain copies of the old books.

(*b*) The quantity and material desired.

(*c*) Whether "black" or "galvanized" forgings are desired.

(*d*) Whether "standard forging" or "finished article" is desired.

Standard forging.—This term is understood to apply to forgings as shown on the plans in this book. In the majority of cases, the forgings as shown are without any finishing other than that which may be made as a part of the forging process, but in some cases where the forgings are used for but one purpose and are of no use until certain machining is done, the finishing processes have been indicated. If other finishing than that shown on the plans in this book is desired, a standard forging should not be ordered, and the remarks that follow and which pertain to "finished articles" should apply.

Finished article.—This term is understood to apply to forgings which have been machined or in some way finished for a particular use and is not intended to include "standard forgings" with finishes as shown in this book. In all cases where such articles are desired, it will be necessary to state specifically the finishes required, and to give complete information

for carrying out the work. If fittings are desired finished in accordance with a standard plan, a statement to this effect should be included in the order.

(*e*) In cases where it is indicated on the die sheet that the forging is made in an "open die," the desired length of the open dimension must be stated.

7. MARKING OF DIES AND DROP FORGINGS.

In order that the die number of a forging may be readily determined without the necessity of examining the Drop Forging Book and comparing the dimensions of the forging with the plans contained therein, it is desired that whenever possible the impression in the die include the die number, in order that this number will also appear on the forging. All new dies should be so marked, and when old dies are annealed for repair or other purposes the die number should be cut.

In the case of very small forgings, where it is impracticable to mark the die, it will be satisfactory to the Bureau to omit the marking prescribed above. In marking all dies, care should be taken to place the number in such position that the number of the forging will not interfere with any possible use to which the forging may be put.

8. STANDARD STOCK OF DROP FORGINGS.

Since the first edition of the Drop Forging Book was issued, the Bureau has undertaken the establishment of standard stocks of the various drop forgings which are used in the navy yards, and for which plans are included in this book. In connection with the work, the investigations which have been conducted have indicated that a number of the forgings for which plans are included are no longer used, and in such cases a note has been included on the plan, which indicates that the forgings are not carried as standard stock. In the case of a few of the larger forgings, no stock has been provided, although the forging is still used, and it is expected in such cases that the forgings will be manufactured as the demands may require. No steps have been taken by the Bureau to

establish standard stocks of forgings which are solely under the cognizance of other bureaus.

When dies for the forgings which are not being carried as standard stock wear out or when the navy yards consider that they are no longer of use, the dies should be disposed of, and in order that the Drop Forging Book may be kept up to date by the addenda which are issued, it is requested that the Bureau be informed from time to time of the dies which are disposed of in order that the plans for these dies may be eliminated from the book.

There are a number of classes of articles for which plans are included in this book but which are no longer drop forged in the navy yards. Standard stocks of these articles have been established and these stocks are maintained by purchase, the specifications listed below being used in this connection in preference to the plans contained in this book.

Die Nos. 1431 to 1448, inclusive—Tap rivets. Spec. 43R1c.

Die Nos. 1752 to 1757, inclusive—Chisel blanks for pneumatic tool. Spec. 40B4.

Die Nos. 1803 and 1804—Punches. Spec. 40P1.

Die Nos. 1805 to 1825, inclusive—Rivet sets for use with pneumatic tools. Spec. 40R2.

9. DISTRIBUTION OF DROP FORGING BOOK AND VANDYKES.

(*a*) *Books.*—This revised edition of the Drop Forging Book will be issued to the various navy yards and stations, to the offices of the various superintending constructors, and to other bureaus, in such numbers as appear most desirable, after consideration of the issues of the edition of 1917 which have already been made. The new edition of this book contains a number of plans which were not included in the old edition, or in Addendum No. 1, and in a number of cases the plans have been revised, but it is believed that the books of the older editions may still serve a useful purpose in the yards. It will be necessary, however, that care be exercised in referring to

the Drop Forging Book on manufacture requests, requisitions, schedules, or cost summaries to clearly state to which edition of the book reference is intended. If, in the opinion of the yards, the retention of the older editions of the Drop Forging Book is not desirable, or if but a few of these books are required, it is requested that the books of the older editions which are not needed be returned to the Bureau. While the supply of the edition of 1919 is limited, it is desired that as liberal a distribution as is possible be made, and the Bureau will carefully consider all requests for additional copies of this book.

(*b*) *Vandykes.*—In order that the navy yards may continue the practice of issuing blue prints of the plans of drop forgings to the various shops and offices for use as working drawings, the Boston, Mare Island, New York, Norfolk, and Portsmouth Navy Yards have been furnished with Vandyke prints of the die sheets for such dies as are located at the individual yards. In every case the tracing of the die sheet for each forging is on file at the Bureau.

10. REVISION OF DROP FORGING BOOK.

It is the Bureau's intention to issue about July 1 of each year, commencing 1920, addenda to this book, which will contain sheets for all dies which have been altered and also a sheet for each new die the manufacture of which has been authorized during the preceding fiscal year. At such intervals of time as the number of changes seems to warrant the action, the Bureau will revise and reissue the Drop Forging Book.

11. COMPILATION OF BOOKS OF PLANS OF OTHER DIE PRODUCTS.

This book contains plans of forgings which are made in drop-forging dies and is not intended to include forgings or products made in dies used in other than drop-forging processes. The Bureau is considering the compilation of books of plans of the products of other dies, such as are used in presses, bolt machines, and forging machines, and if it is found that it is practicable to undertake this work a book generally similar to this one will be compiled and issued at some future time.
